

تحليل عددي - (Numerical Analysis)

from book: Doron Levy, *Introduction to Numerical Analysis*, University of Maryland, 2010.

Chapter 2 – Methods for Solving Nonlinear Problems 2

- 2.1 Preliminary Discussion 2
 - 2.1.1 Are there any roots anywhere? 3
 - 2.1.2 Examples of root-finding methods 5
- 2.2 Iterative Methods 6
- 2.3 The Bisection Method 8
- 2.4 Newton's Method 11
- 2.5 The Secant Method 15

Chapter 3 – Interpolation 19

- 3.1 What is Interpolation? 19
- 3.2 The Interpolation Problem 20
- 3.3 Newton's Form of the Interpolation Polynomial 22
- 3.4 The Interpolation Problem and the Vandermonde Determinant 23

Chapter 5 – Numerical Differentiation 87

- 5.1 Basic Concepts 87
- 5.2 Differentiation Via Interpolation 89
- 5.3 The Method of Undetermined Coefficients 92
- 5.4 Richardson's Extrapolation 94

Chapter 6 – Numerical Integration 97

- 6.1 Basic Concepts 97
- 6.2 Integration via Interpolation 100
- 6.3 Composite Integration Rules 102
- 6.4 Additional Integration Techniques 105
 - 6.4.1 The method of undetermined coefficients 105
 - 6.4.2 Change of an interval 106
 - 6.4.3 General integration formulas 107
- 6.5 Simpson's Integration 108
 - 6.5.1 The quadrature error 108
 - 6.5.2 Composite Simpson rule 109
